

CO₂count

What is CO₂Count?

The CO₂Count service will calculate the amount of CO₂ and other Greenhouse Gases generated by your fleet.

Greenhouse Gases include:

- Carbon Dioxide - CO₂
- Methane - CH₄
- Nitrous Oxide - N₂O

We use the **DEFRA** (Department for Environment, Food and Rural Affairs) figures to calculate the emissions.

Who is CO₂Count for?

For some time many large to medium size businesses have been required by law to report carbon related emissions and develop carbon reduction strategies as part of the UK Government and EU legislation commitments to reduce carbon based emissions.

It now looks increasingly likely that mandatory reporting at lower business consumption use may become a requirement as it is already for certain sectors of Industry.

Many of our existing fleet customers have been seeking advice/help in order to provide reporting on their carbon use, mainly because their own customers have asked for reporting and have been unsure what to report and how.

In order to assist our customers we have developed a new product and service, CO₂Count.

As a company, along with this service, we have undergone registration and accreditation to ISO50001 Energy Management with SGS.

We will also be helping our CO₂Count offset some of their emissions by donating 10% of any proceeds to help protect the world's rain forests.

If you have any questions, please contact info@co2count.org.uk
