Affordable telematics

Our affordable solution is an intelligent, user-friendly tracking system that will result in cost reductions and value to your fleet.

Suitable for all vehicle types and any size of fleet.

- ✓ Reduce accidents
- ✓ Increase driver security
- ✓ Track business mileage
- ✓ Minimise vehicle maintenance
- ✓ Streamline your procedures

Track your vehicles 24/7

With satellite and hybrid mapping and a system refresh every 10 seconds, you can now track your vehicles in real time.

Tele-Gence has impact detection, which will alert you to any vehicle or assets incident and location.

International roaming SIMs enable use of the best networks, ensuring maximum coverage.

Fuel cost management

Tele-Gence helps monitor costs and reduce spend, as well as offering protection against fraudulent transactions.

Direct fuel card integration

Easily integrated with fuel cards, Tele-Gence can also provide accurate and improved MPG by up to 20%. Improved driving patterns and behaviour can reduce fuel consumption and vehicle wear and tear.

- ✓ Fuel fraud alerts - automatic check of fuel filling to vehicle location
- ✓ Accurate MPG and CO2 comparison reports
- ✓ Quick and easy way of viewing fuel transactions
- ✓ Monitor vehicle idling time to reduce wasted fuel

Driver behaviour

Tailor driver behaviour scores to determine your best and worst drivers

Tele-Gence gives you a score for each driver against each journey taken. This enables you to spot dangerous drivers quickly and easily, improving safety, fuel consumption, vehicle maintenance costs, and helps you comply with legislation.

Reports offer a clear and detailed view of harsh breaking, accelerating and cornering events, so you can identify drivers that need to modify their behaviour.

Alerts - allowing you to manage by exception

Tele-Gence can be fully customised, providing a telematics solution that is tailored to your specific requirements, giving you greater knowledge and control over your fleet. You can set alerts to:

- 1 Provide vehicle speed vs road speed limit violations. This allows users to identify extreme speeding.
- 2 Identify vehicles moving outside of your set working hours.
- 3 Vehicle enters or exits any of your set zones.
- 4 Remind you when vehicle servicing, MOT or repairs are due.

You set the parameters and how you wish to receive the information with a fully customisable reporting platform, saving time and giving you insight into your fleet.

Connected cameras

As well as tracking, cameras are a great way to enhance your visibility and protection of drivers. In the event of an incident, you can receive a customisable alert without physically accessing the SD card using our connected cameras.

- ✓ Integrates directly into software – footage visible and downloadable from the platform
- ✓ Recording quality of a very high standard - 1080p
- ✓ Tracker and camera all in one
- ✓ Footage instantly viewable in the platform at the point the incident occurs
- ✓ Blind spot and 360 camera option available

Front and internal rear SD dash cams also available.

Personal trackers

Tele-Gence can also provide personal trackers for individuals on foot or bike, which are easily concealed in clothing, bags or pockets. Choose how frequently you want the device to report its location.

We can also provide personal trackers with panic buttons which alert directly into the platform. You can choose whether you wish to be informed by email or SMS (fees apply), providing peace of mind for lone workers and their managers.

Asset monitoring

As well as vehicle and personal tracking, our platform allows you to track parked assets, plant equipment, and expensive machinery (that does not rely on ignition).

You can easily see where assets are, allowing quick location, assisting with stock taking, theft recovery and improving management efficiency.

- ✓ Self install
- ✓ Internal and external (weatherproof) options available
- ✓ Ideal for security on valuable assets and back-up devices
